iControl Networks Wins *Electronic House* Product of the Year Award

iControl's Wireless Remote Monitoring Solution Honored for Innovation, Excellence and Superior Service

CEDIA, Denver, CO (September 15, 2006) — iControl Networks, Inc., a leading provider of mass-market Web-based solutions to monitor and control your home and business, today announced that it has won the 2006 *Electronic House* Product of the Year Award for its innovative approach to home monitoring and control, and its ability to emerge as the leader and visionary in the rapidly developing home automation market.

“iControl has proven itself as a pioneer in home monitoring and control by providing consumers electronic peace of mind,” said Cindy Davis, editor-in-chief for *Electronic House* magazine. “The iControl solution offers a unique combination of innovative technology, practical purpose and ease-of-use, which we are pleased to award.”

The 2006 *Electronic House* Product of the Year rewards products for technological innovation, outstanding features and overall value. According to editorial staff, iControl was chosen as a winner above hundreds of applicants through a voting process based on product demos and conversations with installers and product users.

iControl's secure online service dramatically improves your lifestyle by providing an entirely new way to see, know and respond remotely to what matters most to you – your family, home and business – from anywhere at anytime. iControl's service is comprehensive and affordable, as well as easy to install and manage. It enables remote access to off-the-shelf wireless security devices, cameras, light modules, sensors, and other devices placed in the home via a web browser, a cell phone or a PDA. Subscribers can receive notifications remotely, make changes to devices at their premises, and view still images and video. The best part? iControl proactively delivers real-time information about your family and home to you – rather than forcing you to track it down.

“In addition to listening carefully to what consumers really want when it comes to home automation, we've worked with service providers, home builders, and consumer electronic companies to provide affordable wireless remote monitoring that everyone can use,” said Reza Raji, president and CEO of iControl Networks. “We are proud to be honored by *Electronic House*; it is always rewarding to be recognized by experts for providing a quality service.”

More information about iControl's selection as an *Electronic House* Product of the Year can be found at <http://www.electronichouse.com/poty/14728.html>.

The iControl service is available now and starter kits begin at \$399 with a monthly fee of \$14.95, which includes a range of accessories including wireless network (IP) cameras, door and window sensors, lamp modules, thermostats, smoke detectors, water and freeze sensors and more.
